SMC Flex Kit 2 - Pads and Clips

SMC originally designed the FLEX for the demanding Technical Fire Rescue market as a canvas replacement. Soon after using it, they realized it is much more than the ultimate in configurable rope management and protection. In fact, the FLEX is FLEXible in its uses - the only limitation is your imagination. Use a stand-alone FLEX or connect multiple FLEX pads with the FLEX CLIPS to help solve everyday problems. SMC recommends this item for the following uses: Protect moving and non-moving ropes / webbing from abrasive edges, protect trees or anchors from damaging ropes / webbing, safely and efficiently redirect rope around obstacles, and to separate moving or static lines. **The FLEX Kit includes two FLEX pads and two FLEX Clips which will allow you to connect the FLEX pads together and provides increased surface area.**

Key Features

- Made from an ultra light-weight, durable, abrasion resistant plastic
- 100% recyclable
- Inter-connectable to configure into any form or fashion desired for when a longer or wider surface area is needed
- Adaptable; can wrap about itself for protection objects from ropes, can be connected in sandwich fashion to form a rope channel, and so much more
