I. Test Conducted: Based on **EN 1385:2012** Helmets for canoeing and white water sports

Test results: Details shown as following table

Clause	Test Method/Requirement	Result
5	Construction	
5.1	Materials The mechanical properties of the materials used in the manufacture of the helmet should not deteriorate significantly during the period of normal use, due to influences such as exposure to sun, to temperature changes or to fresh or salt water. Metal parts used to fasten the chin strap and/or a suspension cradle to the shell, should be protected from or resistant to corrosion. The materials forming the parts of the helmet coming into contact with the skin should not deteriorate in strength significantly due to contact with sweat, and materials which are known to cause skin disorders shall not be used. The thread used for stitching on webbing should be resistant to rotting.	Pass
5.2	Extent of shell When the helmet is placed on a headform of size given in table 1, and the chin strap is secured, the shell, including any holes, shall cover all parts of the headform above the lines ACDF shown in figure 1, except that there may be cut-outs on each side of the helmet to expose the ears for hearing purposes. The dimension `Y` (see figure 1) for the headforms in table 1 shall be taken from table 1 of EN 960:2006. The point C for each headform (figure 1) is the midpoint of ADZ and the point D is vertically beneath it on the reference plane.	Pass
5.3	Holes The shell may be pierced by holes that allow ventilation or the draining of water.	Pass
5.4	Projections Rivet heads shall be rounded and shall not project more than 2 mm beyond the outer surface of the shell. All edges of the shell shall be smooth and rounded to a radius of not less than 1 mm. Any rigid internal projection shall be covered with protective padding.	Pass
5.5	Retention system The width of any chin strap shall be not less than 15 mm. The chin strap shall be fitted with a device to adjust and maintain tension in the strap, and shall not include a chin cup.	Pass
5.6	Face guards and visors If the helmet is fitted with means for attaching a face guard or visor then the means of attachment shall not reduce the degree of protection of the helmet.	Pass
6	Performance requirements	
6.1	Impact protection Helmets shall be capable of withstanding an impact of not less than 15 J. The deceleration of the headform shall not exceed 250 gn, where gn is an acceleration of 9.81 m/s ² . Testing shall be in accordance with 7.6. The helmet shall be capable of conforming to these requirements regardless of which conditioning procedure in 7.5 has been chosen. A helmet that has been subjected to the procedure in 7.6 shall not be subjected to it a second time. NOTE: This implies that in order to use all four conditioning procedures, a set of at least four helmets is needed.	Pass See annex 1

6.2	Retention system strength When the retention system is tested by the method described in 7.7 the maximum dynamic extension shall not exceed 25 mm.	Pass See annex 2
6.3	Retention system effectiveness When the helmet is tested by the method in 7.8 the front edge of the helmet shall not move upwards by more than 80 mm.	Pass See annex 3
6.4	Buoyancy After conditioning for water immersion in accordance with 7.5.3 the helmet shall float to the surface.	Pass
8	Marking	
8.1	Each helmet shall be marked in such a way that the following information is easily legible for the user, and is likely to remain legible throughout the life of the helmet:	--

Notes :

- (1) Test specimen was taken randomly from the sample submitted by client/applicant.
- (2) Whenever 4-aminodiphenyl (CAS number 92-67-1), 2-naphylamine (CAS number 91-59-8) and 4-methoxy-m-phenylene-diamine (CAS number 615-05-4) is found, the use of banned azo colorants cannot be reliably ascertained without additional information, e.g. the chemical structure of the colorants used.
- (3) In case polyurethane materials are used, e.g. PU foams and coatings and in prints, it cannot be ruled out that certain amines, e.g. 4,4'-methylene-dianiline (MDA, CAS number 101-77-9) and 2,4-toluylen-diamine (TDA, CAS number 95-80-7) are released from the PU component and not from a banned azo colorant.
- (4) In case of pigment prints care has to be taken that 4,4'-methylene-dianiline (MDA, CAS number 101-77-9) is not released from a source of banned azo colorants but from e.g. a chemical fixing agent.

Requirement : ≤ 30 mg/kg for each aromatic amine according to Requirement of Entry 43 of Regulation (EC) No. 552/2009 amending Annex XVII of REACH Regulation (EC) No. 1907/2006 (previously restricted under Directive 2002/61/EC).
